

Welcome to the DBTS reCAPTCHA Extension for WYSIWYG Webbuilder!

DB Technosystems is well known for quality, custom made software. The main fields of application are database driven scripts like membership scripts, Shopping Carts, directory scripts and other similar.

The WB Form Processor extension, released in 2008 and then continuously improved, was the result of a continuously rising request for a simple, trouble free, multi featured form processing script. It is essential, but flexible and powerful. The output is highly customizable and it will be enriched with additional features in the near future.

It is now integrated with two add-on extensions:

- a. The DBTS reCAPTCHA which is a very simple extension that allows you to embed the famous reCAPTCHA in your forms with just a few mouse clicks. It is intended only for use with the DBTS Form Processor
- b. The DBTS Preview extension, a completely customizable extension that works with the DBTS Form Processor Extension and will allow you to create Preview Pages and Data Merge Confirmation Pages simply dragging the Preview Object in your pages.

In the next pages you will find the complete installation and usage instructions for the DBTS reCAPTCHA Extension. Please read them carefully and you will be able to install and use it in just a few minutes.

Thank you

DBTechnosystems.com

Requirements

The DBTS reCAPTCHA extension requires PHP 4.3 or higher support.

Installation

The DBTS reCAPTCHA extension for WB is installed just as any other WB extension: Through the extension Manager, you can perform either an Automatic installation or a manual installation after you have downloaded the zip with the extension files.

Using the DBTS reCAPTCHA Extension

Drag the DBTS reCAPTCHA object in your page. The default size that will appear, is that of the following three available themes:

Red theme (default)

White Theme

Blackglass theme

The last available theme instead, is "Clean" and is a customizable theme. Please note that this theme is larger than the first three.

Clean theme
(customizable)

The "Clean" theme has 4 visual settings:

Background color

Border color

Input Field Background Color

Input Field Border Color

Which you can select through the Visual settings of the extension. Below is an example of the "Clean" theme, customized:

Language Selection:

The DBTS reCAPTCHA Extension supports the standard languages supported by reCAPTCHA. Just select, in the Visual Details section, the desired language.

Remember to set, in the DBTS Form Processor, the "Force ReCAPTCHA" setting to "Yes".

To use reCAPTCHA you need to first create a reCAPTCHA account, and generate your Private and Public Keys. To do so please visit <http://recaptcha.net/> .

After you have the two keys, double click the reCAPTCHA object and type your Private and your Public Keys in the related fields.

Please note that DBTS reCAPTCHA extension will only work in **php** pages.

Support:

Contact us at info@dbtechnosystems.com . But please first read this manual carefully, the answer to your question is probably already contained in this manual.

Support that goes BEYOND simple email help and requires entering your hosting account to solve any issues, can only be provided on an agreed upon, paid for, basis.

License:

The PHP code used in this extension has been developed by DB Technosystems.com based on the original code supplied by Google (which acquired reCAPTCHA some time back). The extension is freely available to all WB users, and can be embedded in any work, personal or commercial. You are not allowed to redistribute or sell this extension. Please address to our download page anyone interested in using this extension:

This software is delivered AS IS. By installing and using it, you agree that Pablo Software Solutions or DB Technosystems will not be held liable for ANY damage, of ANY type, caused by the use of this software. Installing and using this software implies that you fully and unconditionally accept these terms. USE AT YOUR OWN RISK. Please fully test before using it.

Credits:

1. Credits go to Pablo Software Solutions for making (and further improving) their Extension Builder! And for continuously improving their WYSIWYG WB6. Cudos!
2. Many thanks to the WB Forum Users that have provided feedback! Without this feedback it wouldn't have been possible taking the script to this level.

Have fun!

George (Forum nickname Navaldesign)
